

Cattle Investment SaaS

Business Plan Outline: Discovery Document

Version 1.3 | Discovery Phase
Full-Scope Partnership: Born to Plate
May 2026

1. Document Purpose

This document is the initial discovery outline for a formal business plan. It defines the partnership scope, three phase investment model, phase based cost economics, and platform functionality. Use it to align founders, the operating ranch partner, and Ty's firm as insurance partner before drafting financial projections and engaging legal counsel.

This is not a securities offering document.

2. Executive Summary (Business Plan Section)

- Vision: fractional cattle investment from birth (or purchase) through auction/plate
- Partnership: platform operator + ranch partner with existing land lease and feedlot network
- Launch anchor: one existing land lease; expand to additional leases and partner feedlots
- Investor value: enter at any phase; upfront phase costs; declining risk; weight gain value capture
- Platform revenue: phase gate fees, marketplace commissions, insurance placement, rancher subscriptions
- Market validation: global platforms prove demand for fractional livestock; see Section 3

[Mission statement, 3 year targets, capital ask: to be completed in business plan v1]

3. Comparable Platforms & Market Validation (Seed Pitch)

Multiple platforms worldwide validate investor appetite for fractional cattle ownership, blockchain traceability, and farmer capital access. This section references active and historical comparables to support seed fundraising for our SaaS platform.

We are building infrastructure and recurring B2B revenue, not holding investor capital on our balance sheet.

Platform	URL	Model	Relevance to our pitch
Livestock Wealth	livestockwealth.com	Crowdfarming: buy cattle/trees; farmer buyback at harvest	Proved retail demand (~ZAR 100M volume); platform liquidated May 2026. Lesson: compliance + escrow discipline required.
Cowinance	cowinance.com	NFT per calf; crypto profit share at sale	Closest NFT per animal model; validates digital certificate UX.
Pula Stock	pulastock.com	Cattle tokenization; fractional shares; secondary trading (Botswana)	Validates token liquidity + farmer capital access; beta launch.
Fresh Field	freshfield.co	Dual NFT (investment + production); monthly yield from livestock	Active \$980K seed round; phased NFT structure similar to our tranches.
Gomini	gomini.io (see press)	NFT fractional cow ownership; cluster model (India)	Raised growth capital; indigenous breed + yield narrative.
Cow Currency	cowcurrency.com	Phygital cow units; milk/ghee benefits + NFT (India)	Consumer + investor hybrid; traceability marketing.
CattleProof Verified	cattleproof.com	USDA PVP blockchain traceability (US, Wyoming)	US regulatory precedent; potential integration partner, not competitor.
BeefLedger	beefledger.io	Beef supply chain provenance (Australia)	Born to plate ledger reference architecture.
AgriCore × Blade Labs	bladelabs.io/ insurecow	Sharia compliant livestock invest + blockchain + Takaful (Bangladesh)	Insurance + governance platform parallel to Ty's firm integration.

Blade Labs / AgriCore: <https://bladelabs.io/insurecow> Insured livestock investment + on chain governance

CrowdSpace profile: <https://thecrowdspace.com/platform/livestock-wealth/> Livestock Wealth funding volume statistics

3.2 Why we win vs comparables (seed narrative)

- US based operating ranch partner with existing land lease and feedlot network (not remote crowdfund only)
- Three phase tranches with declining risk and phase gate liquidity (not hold to harvest only)
- SaaS + rancher subscription MRR/ARR (platform revenue decoupled from cattle balance sheet risk)
- Ty's firm insurance integration (mortality, transit, liability) vs uninsured retail crowdfunds
- Reg D accredited structure + SPV per pool (lesson from Livestock Wealth regulatory failure)
- Feedlot co investment model aligns finish partners before auction exit

[TAM/SAM/SOM sizing, seed ask amount, use of funds breakdown: to be completed in business plan v1]

4. Partnership Structure & Launch Anchor

4.1 Founding partnership: full lifecycle scope

The founding team operates across the entire cattle lifecycle (Phases 1 through 3). External investors participate phase by phase. The partnership provides land, caretaking, feedlot capacity, and auction exit. This is not a single segment broker model.

Partner role	Contribution	Business plan section
Platform / operating company	SaaS, investor marketplace, legal wrapper, fees	§ Company Overview
Ranch partner	Existing land lease, herd ops, caretaking, regional relationships	§ Operations
Feedlot partners	Finishing capacity; co-invest % of Phase 3 costs	§ Phase 3 Model
Insurance partner (Ty's firm)	Mortality, transit, liability products	§ Insurance Strategy

4.2 Launch anchor: existing land lease

MVP begins on the partner's current land lease (no new land acquisition required). Phase 1 pools run on this lease. Cattle move to backgrounding on the same or adjacent lease ground before feedlot placement.

[Lease location, acreage, carrying capacity (AU), term, assignability to SPV: to be completed in business plan v1]

5. Three-Phase Investment Model

Each phase is a distinct investment tranche with its own upfront cost budget, risk profile, weight gain thesis, and exit gate. Risk decreases as cattle mature and capital at risk shifts from high mortality early life to market price exposure at finish.

Phase	Industry stage	Typical duration	Weight range	Relative investor risk	Primary value driver
Phase 1	Cow-calf / weaning (newlings)	6 to 10 mo	Birth to 450 to 700 lb	Highest	Survival + weaning weight
Phase 2	Backgrounding / stocker	3 to 6 mo	450 to 700 lb to 700 to 900 lb	Medium	ADG on pasture/drylot
Phase 3	Feedlot finishing to auction	4 to 6 mo	700 to 900 lb to 1,200 to 1,400 lb	Lower mortality	Feed conversion + market price

Phase gate milestones

Gate	Trigger	Investor action
Phase 1 to 2	Weaning complete; health protocol; min weight	Roll forward (fund Phase 2 budget) or exit at gate NAV
Phase 2 to 3	Yearling weight; preconditioning certs	Roll forward (fund Phase 3 budget) or exit
Phase 3 to Payout	Market weight; feedlot completion	Auction sale; pro-rata proceeds + feedlot return

6. Phase-Based Cost Model (Not Monthly Fees to Investors)

Investors fund each phase through an upfront phase budget, not recurring monthly management fees. The budget covers all expected costs for that segment of the lifecycle. As cattle gain weight, pool Net Asset Value (NAV) increases. Investors capture value at phase exit proportional to ownership.

6.1 How phase budgets work

- Platform publishes a Phase Cost Sheet per pool: itemized costs + contingency + platform phase fee
- Investors commit capital into the phase budget before operations begin (or at pool close)
- Costs draw down against the budget as incurred (feed, vet, lease allocation, transport)
- Unspent contingency returns to investors at phase gate or rolls to next phase
- NAV at gate = (live weight × market index) + cash minus liabilities; gain/loss vs phase budget

6.2 Illustrative Phase 1 cost categories (per head)

Cost line	Description	Workshop \$/head
Purchase / birth cost	Auction, private treaty, or internal breeding allocation	_____
Land lease allocation	Share of existing lease (Phase 1 carrying capacity)	_____
Feed & mineral	Supplemental feed on lease	_____
Vet & health protocol	Vaccines, deworm, castration, tag (840 EID)	_____
Caretaking & labor	Partner ranch labor allocation	_____
Mortality contingency	Pool level reserve (e.g., 3 to 5%)	_____
Platform phase fee	Origination + Phase 1 processing (% of budget)	_____
Phase 1 budget total	Sum: investor upfront per head	_____

6.3 Phase 2 & 3 cost categories (per head)

Phase	Key cost lines	Workshop \$/head
Phase 2	Pasture/drylot feed, lease, vet, transport, contingency, platform fee	_____
Phase 3	Feedlot yardage + ration, transport, vet, contingency, platform fee	_____

6.4 Value capture as weight increases

Investor return within a phase is driven by weight gain relative to phase budget spent:

$$\text{Phase NAV} = (\text{head count} \times \text{avg weight} \times \$/\text{lb market index}) + \text{cash minus accrued costs}$$

At each phase gate, investors who exit receive pro rata share of NAV. Investors who roll forward apply their NAV as credit toward the next phase budget (top up if Phase N+1 budget exceeds NAV).

7. Feedlot Partner Co-Investment Model (Phase 3)

Founding feedlot partners share a defined percentage of Phase 3 costs in exchange for a defined percentage of auction proceeds (or a preferred return on their co investment). This aligns feedlot operators with performance and reduces upfront capital required from external investors.

Element	Description	Workshop terms
Feedlot cost share	% of Phase 3 budget borne by feedlot partner (yardage, ration, etc.)	___%
Investor cost share	Remaining Phase 3 budget funded by investors	___%
Auction return split	Feedlot partner return of co invested costs + agreed profit share	___%
Investor return	Pro rata auction proceeds after feedlot return and platform fees	Balance
Settlement	Single auction event; escrow distribution within X business days	___ days

Example structure (illustrative; validate with feedlot partner):

Feedlot contributes 30% of Phase 3 per head budget. At auction, feedlot receives 30% of gross proceeds until co invested amount plus 8% return is met. Remaining proceeds distributed to investors pro rata by ownership.

[Named feedlot partners, capacity (head), geographic radius from lease: to be completed in business plan v1]

8. Declining Risk Profile by Phase

Risk type	Phase 1	Phase 2	Phase 3
Mortality / disease	High	Medium	Low
Weather / calving	High	Medium	Low
Feed cost volatility	Low to Med	Medium	High
Market / price	Low	Medium	High
Operational (theft, injury)	Medium	Medium	Medium

Marketing message: later phase entry offers shorter duration and lower biological risk. Earlier phase entry offers higher weight gain upside with higher mortality exposure. Insurance products weighted toward Phase 1 and 2 (mortality, predator). Phase 3 toward price protection (V2).

9. Platform Revenue Model

Platform revenue comes from phase transitions, marketplace activity, insurance placement, and recurring rancher subscriptions. Investors are not billed monthly per head SaaS fees.

Revenue line	When charged	Basis	Target rate
Phase processing fee	Each phase gate (1 to 2, 2 to 3, 3 to auction)	% of phase NAV or budget	2 to 3%
Pool origination fee	Primary raise at pool launch	% of capital raised	3 to 5%
Marketplace commission	Secondary trade at phase gate	% of trade	2 to 3%
Insurance placement	Policy bind	Carrier commission share	TBD with Ty's firm
Rancher subscription (monthly)	Recurring	Per ranch account	TBD
Rancher subscription (annual)	Recurring	Per ranch account (discounted)	TBD

9.1 Rancher subscription revenue (B2B SaaS)

Third party ranchers pay a monthly or annual subscription to list and market their cattle on the platform. Subscribers gain access to the rancher portal, investor facing catalog listings, phase based pool creation tools, and event ledger for their head count. Subscription revenue provides recurring platform income independent of investor pool closes.

Tier	Billing	Includes (outline)	Workshop price
Rancher Basic	Monthly	Ranch profile, list head count, basic catalog listing	_____
Rancher Pro	Monthly	Pool creation, phase cost sheets, investor marketplace listing	_____
Rancher Annual	Annual	Pro features at discounted annual rate	_____

Rancher registration and onboarding process will be defined in a later discovery phase. This outline captures subscription as a revenue line and B2B access model only.

[Subscription tier features, pricing, free trial, founding rancher partner exception: to be completed in business plan v1]

10. Product & Platform (Business Plan Section)

Module	Name	Summary
A	Asset catalog & tokenization	Pools, phase tranches, NFT style certificates with tag metadata
B	Lifecycle event ledger	Born to plate events, documents, weight history
C	Phase transitions & liquidity	Roll, exit at gate NAV, secondary window, auction settlement
D	Phase budget engine	Cost sheets, drawdowns, NAV calc, investor top up/roll logic

E	Investor marketplace	KYC, accredited onboarding, cap table, e sign
F	Rancher B2B portal	Subscription gated access, listings, event logging, expense receipts
G	Processor / auction	Feedlot slot, auction consignment, settlement split
H	Insurance integration	Quote at phase entry, claims workflow via Ty's firm
I	Document vault	Bill of sale, vet certs, lease, harvest; hash anchored
J	Ledger technology	Hybrid DB + periodic hash anchor (MVP); optional public NFT V2

11. Insurance Strategy (Business Plan Section)

Insurance products are offered through Ty's firm as licensed brokerage partner. The platform provides quote and bind UX; the firm handles carrier relationships and compliance.

Product	Primary phase	Funded from
Mortality	Phase 1 and 2	Phase budget line item
Predator / wild animal	Phase 1 and 2	Phase budget
Transit	All	Phase budget at move
General liability	All	Operating company / ranch
Price protection	Phase 3	Optional add on (V2)

[Ty's firm legal role, commission split, required vs optional by phase: to be completed in business plan v1]

12. Legal & Regulatory (Business Plan Section)

Recommended structure: SPV LLC per pool. SPV holds cattle title. Ranch and feedlot under contract.

- Securities: Reg D 506(c) accredited investors (likely)
- USDA 840 EID traceability reference on ledger
- Escrow partner for investor funds (avoid money transmission)
- Feedlot co investment: legal agreement separate from investor PPM
- Land lease: confirm assignability / sublease to SPV

[Securities counsel engagement, state of formation, blue sky states: to be completed in business plan v1]

13. Go-to-Market & MVP

Stage	Scope	Timeline
MVP	One land lease; one 50 head Phase 1 pool; manual ledger; full 3 phase path; accredited investors	6 to 9 mo
V1	Rancher subscriptions live; feedlot co invest; secondary gate trading; 3 to 5 ranches	9 to 18 mo
V2	Multi lease; auction API; insurance automation; consumer traceability QR	18 to 36 mo

14. Financial Projections (Business Plan Section: Outline)

- Per head phase budgets (Phase 1, 2, 3) from ranch + feedlot worksheets
- Pool P&L: 50 head example from birth/purchase through auction

- Platform revenue: pools/year × phase fees + origination + rancher subscriptions (MRR/ARR)
 - Operating expenses: legal, tech, compliance, staff
 - Feedlot co invest return waterfall
 - Sensitivity: mortality +10%, market price minus 10%, feed +15%
-

15. Risk Analysis (Business Plan Section: Outline)

Risk	Mitigation
Cattle mortality	Pool size, vet protocols, Phase 1 insurance, contingency line
Market price at auction	Phase 3 shorter duration; hedging V2; feedlot timing
Feedlot partner default	Contractual SLA; backup feedlot; escrow on proceeds
Securities non compliance	Counsel before first dollar; Reg D structure
Lease termination	Term at or above pool duration; assignability confirmed
Low rancher subscription uptake	Founding partner as anchor tenant; tier pricing discovery

16. Partner Workshop: Decisions Required

#	Question	Decision
1	State / lease location	_____
2	Phase 1 pool size (head)	_____
3	Actual Phase 1 \$/head budget (from ranch books)	_____
4	Feedlot partner name(s) + cost share %	_____
5	Auction return split to feedlot	_____
6	Target accredited investor	_____

	minimum	
7	Insurance required on Phase 1?	_____
8	Rancher subscription monthly / annual price targets	_____
9	First pool target launch date	_____

17. Full Business Plan: Table of Contents (Next Draft)

- 1. Executive Summary
- 2. Company Description & Partnership Agreement Summary
- 3. Market Analysis (US beef, fractional investment, comparable platforms: Section 3)
- 4. Organization & Management (founders, ranch partner, Ty's firm advisory)
- 5. Products & Services (platform modules, phase model, insurance, rancher subscriptions)
- 6. Operations Plan (land lease, caretaking, feedlot, auction)
- 7. Phase Based Financial Model (per head budgets, NAV, waterfalls, MRR/ARR)
- 8. Marketing & Sales Strategy (investor acquisition, rancher B2B subscriptions)
- 9. Legal & Regulatory Compliance
- 10. Risk Factors
- 11. Funding Request & Use of Proceeds
- 12. Appendices (comparable platform links: Section 3.1, lease summary, sample PPM, glossary, rancher registration TBD)

End of Discovery Outline
